```

prepare clipboard (textfile)

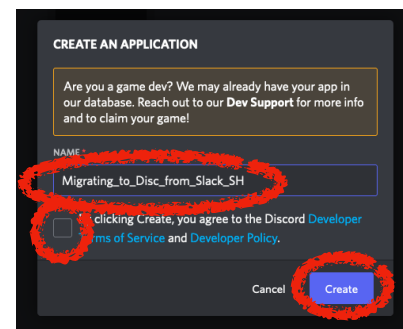

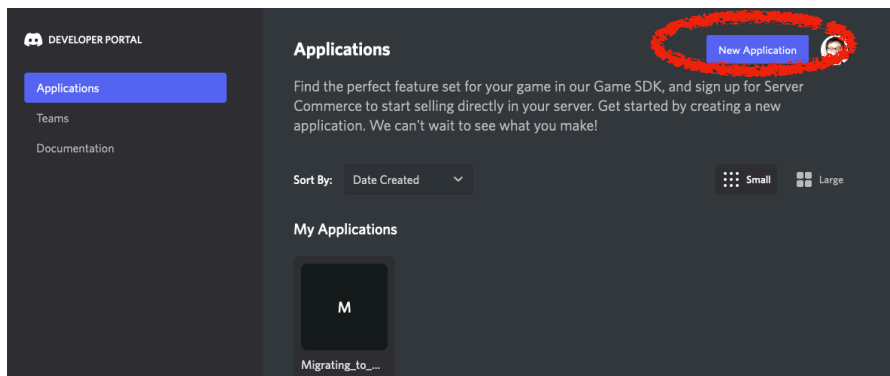

```
Clip.txt 編集済み
BOTOKEN
BOTLINK
CATEGORY_ID
CODE_DIRECTORY
JSON_DIRECTORY
```

Preparation (perform once, even if you want to migrate multiple Workspaces)

Discord

CREATE DISCORD BOT

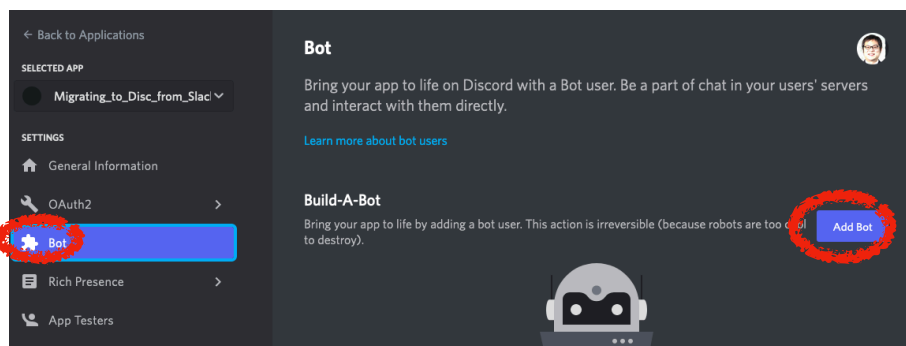

- 1, login to <https://discord.com/developers/applications>
- 2, New Application

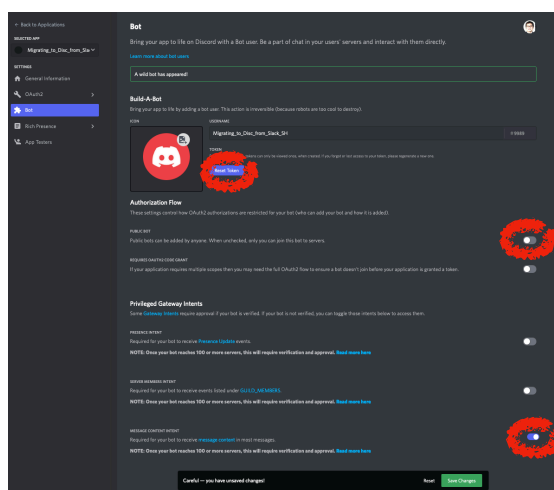

Note: too simple name will cause an error something like "too many people use this name" e.g. do not use 'test'.

Note: The name cannot include "discord"

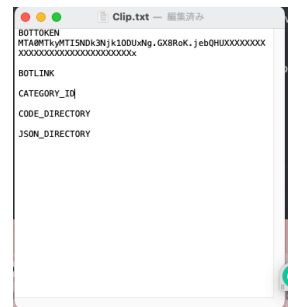

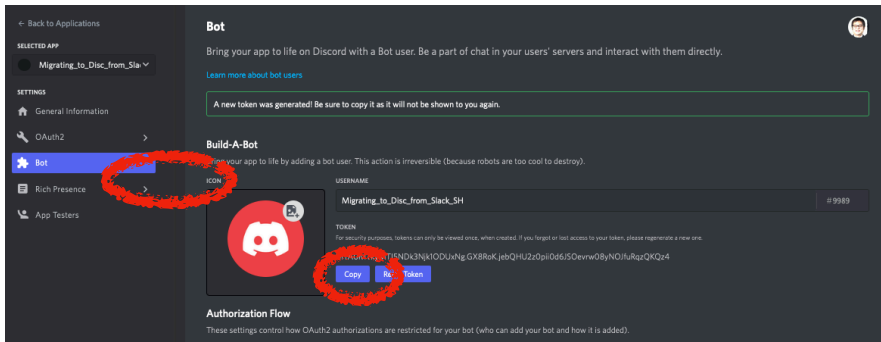

3. bot -> add bot -> yes, do it!

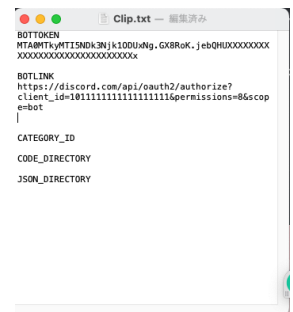

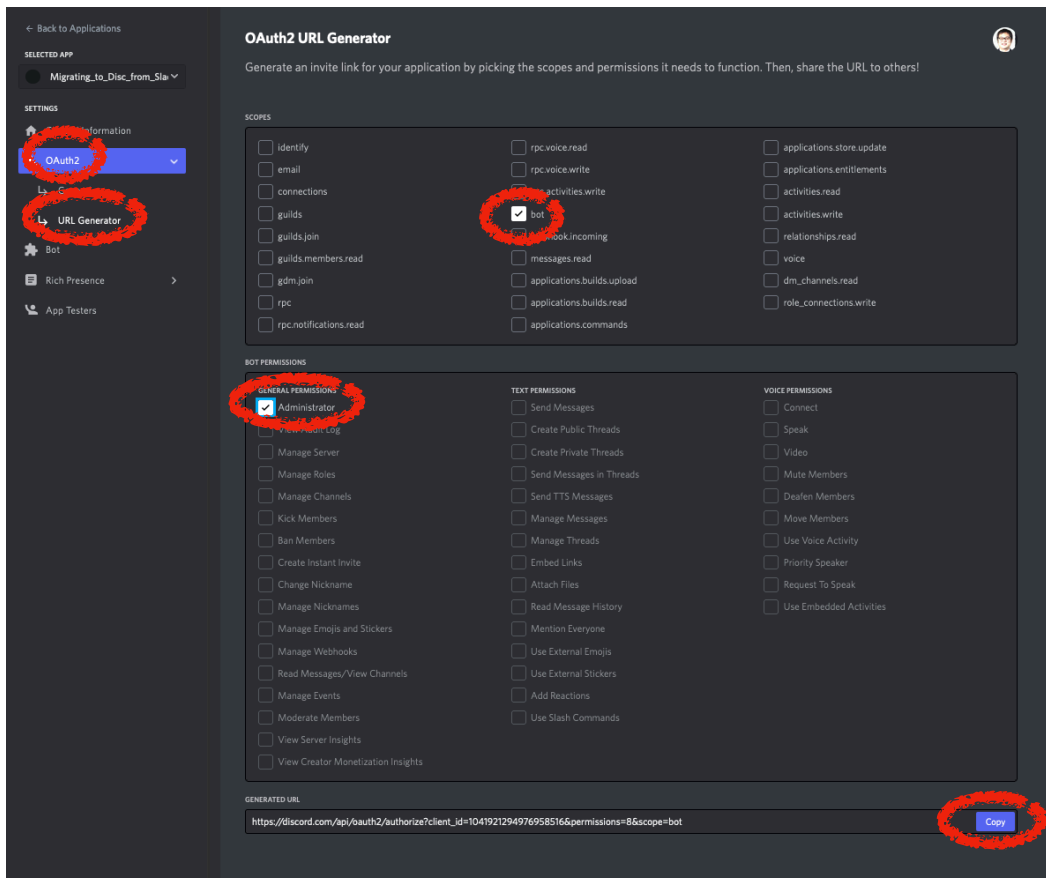

4. Public Bot off -> Message Content Intent on -> Reset Token

5. Copy the BOTTOKEN -> paste it to the clipboard

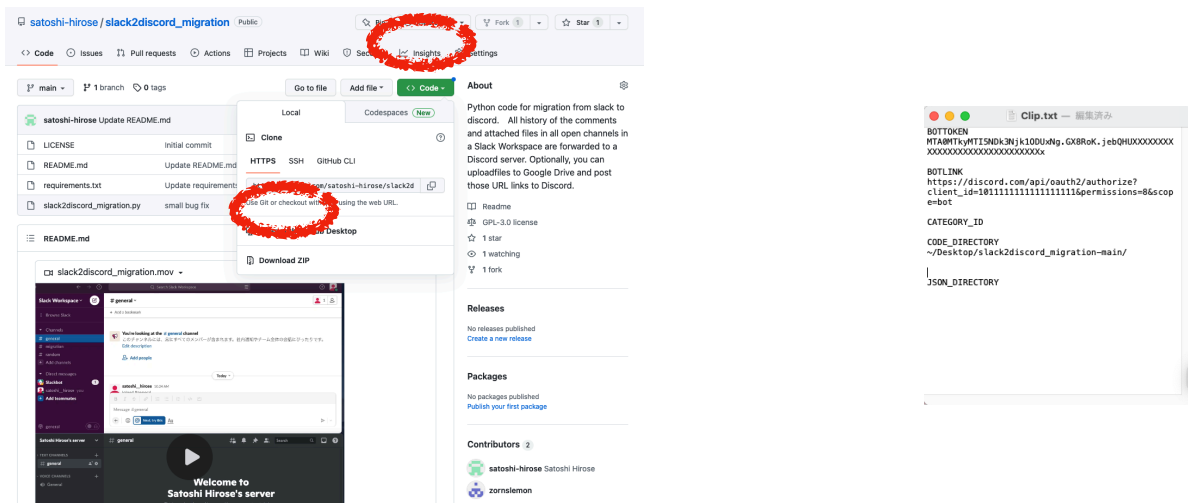

6. OAuth2->URL Generator -> bot -> Administrator -> Copy the link-> paste it to the clipboard

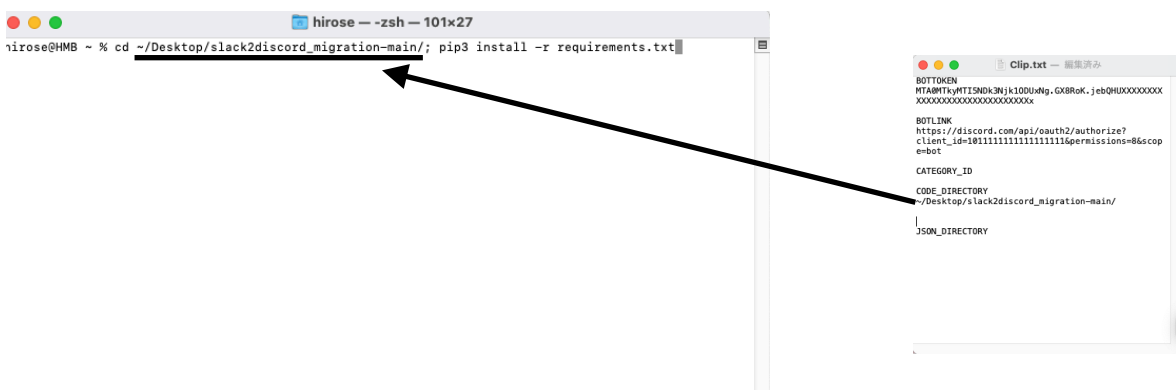

pip (Terminal)

1, Download ZIP of this repository and unzip -> copy the path of the unzipped directory (CODE_DIRECTORY)

2, in terminal, install requirements "cd CODE_DIRECTORY; pip3 install -r requirements.txt"

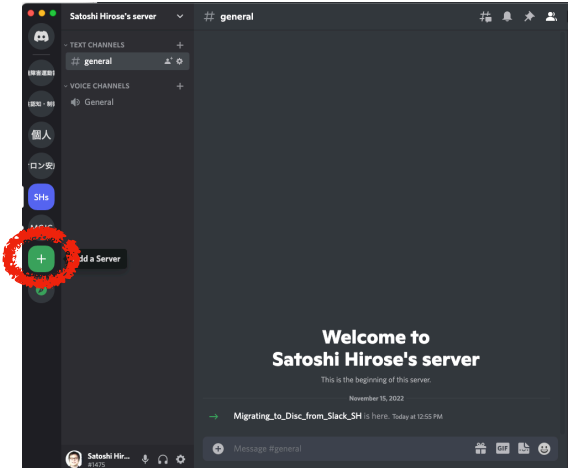

Preparation for each server

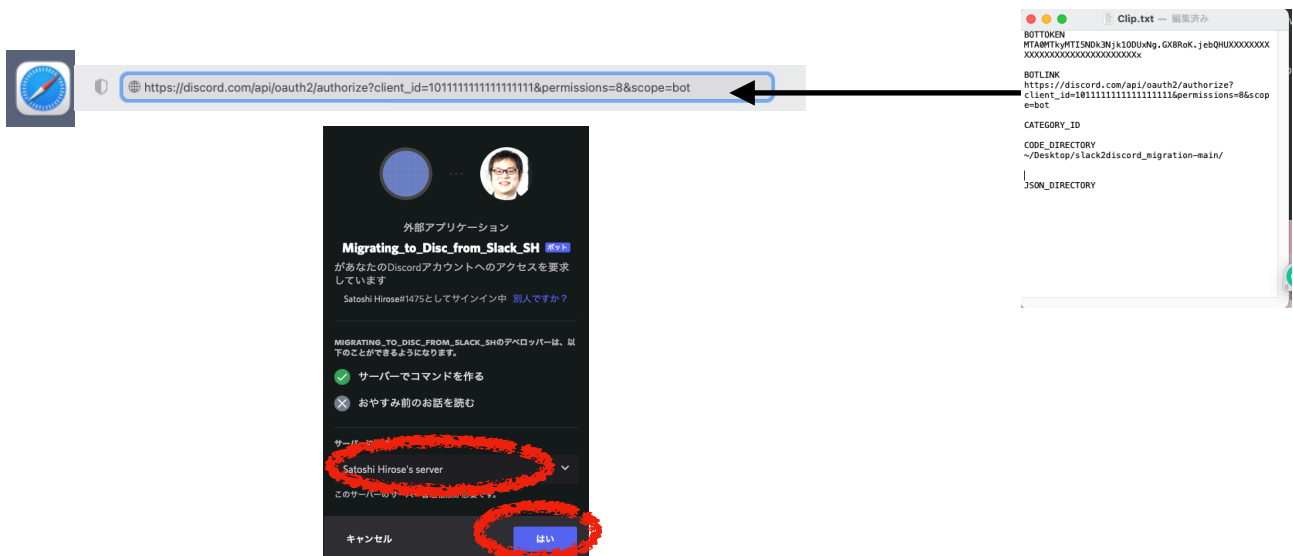

Discord

ADD THE BOT TO DISCORD SERVER

1. Create a new server in Discord or choose the target server, which you can admin.

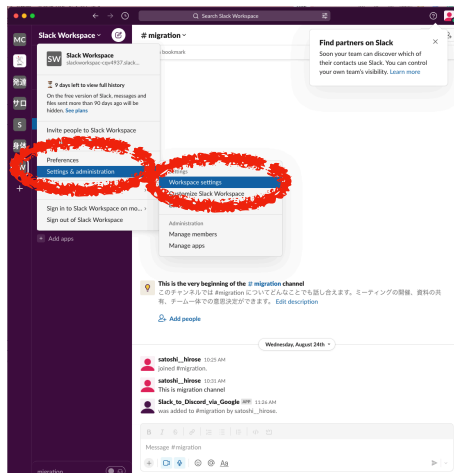

2. open the BOTLINK with web browser -> add to server -> certification

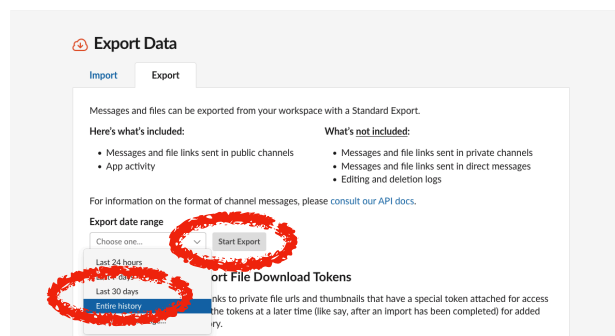

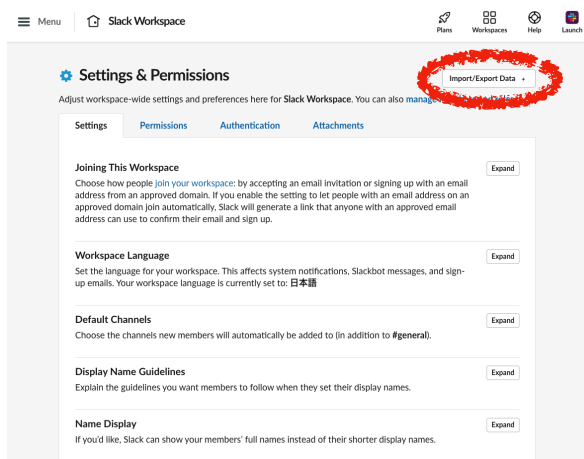

Slack

CREATE AND DOWNLOAD THE DATA (ADMIN RIGHT REQUIRED)

1, Left click the workspace name -> settings & administration -> workspace setting

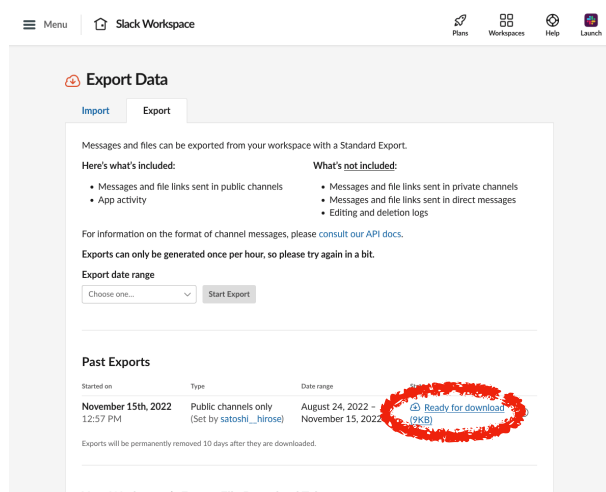

2, import/export data -> export -> Export date range "entire history" -> start export

3, wait for a while (slackbot will announce finish)-> refresh the site (F5)

4, download the exports

5, unzip the downloaded file and find the directory include all JSON file with a name like "Slack Workspace Slack export Aug 24 2022 - Nov 15 2022"

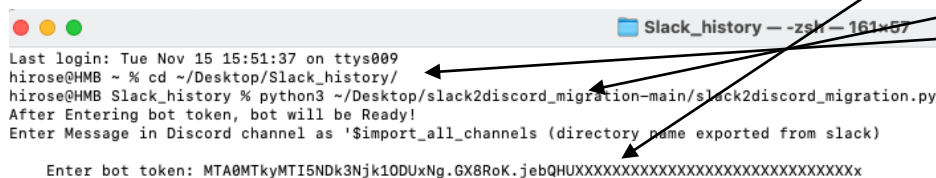

Rename the directory without spaces (JSON_DIRECTORY)

Run the script

python

- 1,[terminal] go to JSON_DIRECTORY ("cd ~/Desktop/Slack_history/")
- 2, type "python3 CODE_DIRECTORY/slack2discord_migration.py"
- 3, enter BOTTOKEN->press enter

```
Last login: Tue Nov 15 15:51:37 on ttys009
hirose@HMB ~ % cd ~/Desktop/Slack_history/
hirose@HMB Slack_history % python3 ~/Desktop/slack2discord_migration-main/slack2discord_migration.py
After Entering bot token, bot will be Ready!
Enter Message in Discord channel as '$import_all_channels (directory name exported from slack)
Enter bot token: MTA0MTkyMTI5NDk3Njk1ODUxNg.GX8RoK.jebQHUXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX
```

```
BOTTOKEN
MTA0MTkyMTI5NDk3Njk1ODUxNg.GX8RoK.jebQHUXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX

BOTLINK
https://discord.com/api/oauth2/authorize?
client_id=101111111111111111&permissions=8&scop
e=bot

CATEGORY_ID

CODE_DIRECTORY
~/Desktop/slack2discord_migration-main/

JSON_DIRECTORY
~/Desktop/Slack_history/
```

Discord

- 1, right-click "text channel" -> copy ID (CATEGORY_ID)-> paste it to the clipboard

```
BOTTOKEN
MTA0MTkyMTI5NDk3Njk1ODUxNg.GX8RoK.jebQHUXXXXXXXXXXXXX
XXXXXXXXXXXXXXXXXXXXXXXXXXXXX

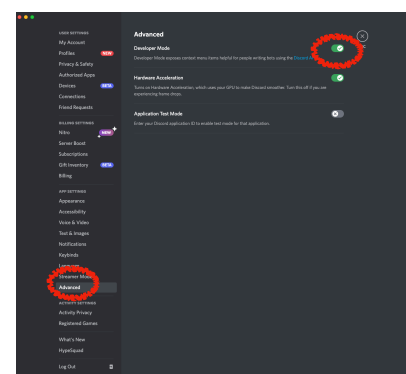

BOTLINK
https://discord.com/api/oauth2/authorize?
client_id=101111111111111111&permissions=8&scop
e=bot

CATEGORY_ID
1011809799723000000

CODE_DIRECTORY
~/Desktop/slack2discord_migration-main/

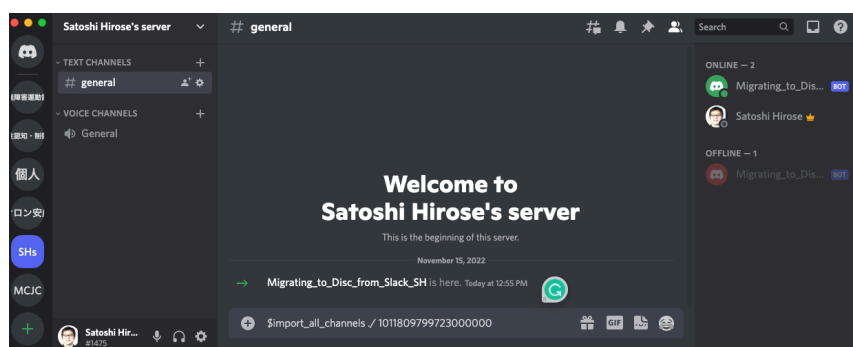

JSON_DIRECTORY
~/Desktop/Slack_history/
```

(if not found, user settings(⚙) -> advanced -> turn on developer mode)

- 2, in a text channel (e.g. general) in Discord, type "\$import_all_channels ./CATEGORY_ID"

optionally, you can run without CATEGORY_ID ("import_all_channels ./")

- 3, wait a while (about [number of comment] x 1 sec)

SORRY! THE BELOW PAGES ARE UNDER CONSTRUCTION

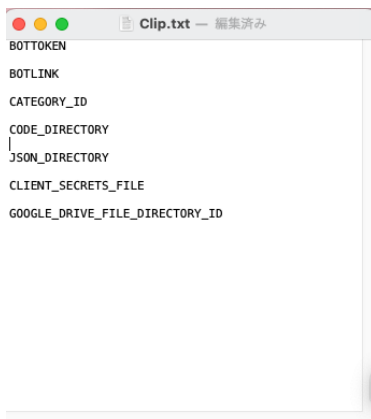

2. Upload files to Google Drive and post URL link to discord.

Rewrite Line 14 of slack2discord_migration.py as “UPLOAD_TO_GOOGLE = True”

```
1 #!/usr/bin/env python3
2 # Author: Satoshi Hirose modified from Rocky Slavin's great work (https://github.com/rslavin/slack2discord)
3 # Slack message history importer for Discord: all channels are imported from Slack message history directory
4 import json
5 import os
6 import time
7 import requests
8 import discord
9 #ADDED on 8/22
10 import re
11 import mimetypes
12 import html
13
14 UPLOAD_TO_GOOGLE = True
15 if UPLOAD_TO_GOOGLE:
16     GOOGLE_DRIVE_DIR_ID = input("Enter Google Drive's Directory ID: ")
17     from pydrive.drive import GoogleDrive
18     from pydrive.auth import GoogleAuth
19     gauth = GoogleAuth()
```

prepare clipboard (textfile)

```
BOTTOKEN
BOTLINK
CATEGORY_ID
CODE_DIRECTORY
JSON_DIRECTORY
CLIENT_SECRETS_FILE
GOOGLE_DRIVE_FILE_DIRECTORY_ID
```

Preparation

the same as above (PP. 2-4).

Preparation for each server

in addition to above (PP. 5-8),

Google Cloud Console

1. Go <https://console.cloud.google.com/home/dashboard> -> CREATE PROJECT
- 2.
- 3.
4. My First Project (or a project name you have created)-> New Project -> create (!
remember your project name: PROJECT_NAME)
 2. Go to APIs overview -> ENABLE APIS AND SERVICES -> search
"Google Drive API" -> ENABLE
 3. CREATE CREDENTIALS (if not found, CREDENTIALS -> CREATE
CREDENTIALS -> Help me choose)
 4. Google Drive API -> User data -> enter
 5. Scopes -> save and continue -> Application type "Desktop app" ->
create -> DOWNLOAD -> done -> rename the downloaded file as
"client_secrets.json" (CLIENT_SECRETS_FILE)
 6. OAuth consent screen -> test user -> add users ->
YOURGOOGLEACCOUNT@gmail.com -> save
or PUBLISH APP

- Google Drive

- 1, Create a directory, where the attached files will be stored
- 2, Copy&Paste the directoryID to GOOGLE_DRIVE_FILE_DIRECTORY_ID
of the clipboard.
- 3, Share the directory with "anyone with the link" as "Viewer"

Run the script

python

1, put CLIENT_SECRETS_FILE in JSON_DIRECTORY

2,[terminal] go to JSON_DIRECTORY

3, type "python3 [slack2discord_migration directory]/
slack2discord_migration.py"

4, enter GOOGLE_DRIVE_FILE_DIRECTORY_ID

3, enter BOTTOKEN

- Discord

1, right click "text channel" -> copy ID (CATEGORY_ID) (if not found,
user settings -> advanced -> turn on developer mode)

2, in a text channel (e.g. general) in Discord, type
"\$import_all_channels ./ CATEGORY_ID"

3, wait a while (about [number of comment] x 1 sec)

optionally, you can run without CATEGORY_ID ("\$import_all_channels ./")
